

# We are an **ECLIPSE** practice

This means we use case finding technology.

The decision about what to do is made by your care team, and is never made by technology alone.

The Eclipse tool allows us to search our records to find patients who may need extra support or care, (known as 'profiling').

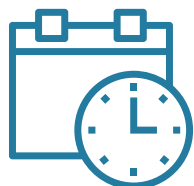

Decisions are based on 'codes' within your medical record.

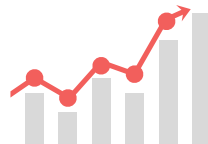

If the tool flags your record a member of the care team may review it.

The codes tell us what medication you take and the conditions you have.

And takes steps, such as reviewing your medication, or inviting you in for an appointment.

Using the codes in this way has been shown to improve standards of care.

**Feel free to ask us for more information about how the technology works.**

**For more information about your rights - refer to the full privacy policy on our main website.**
